

## **MANDATORY WINTER CARE FOR YOUR AUTOMATIC POOL COVER**

- 1. The water level in the pool must not be lowered more than 5 inches from normal operating levels, this level must be maintained.**
- 2. The cover pump must be on the cover at all times to remove water. Based on freezing, the pump will need to be monitored.**
- 3. Leaves and debris should be removed as they accumulate on the cover because they cause excess weight and they can stain the cover.**
- 4. DO NOT attempt to operate the cover if the pool water is low, or if the cover has water, snow or ice on it.**
- 5. Attempting to break and remove snow or ice from the cover can cause damage to both the cover itself and/or the guides.**
- 6. If the leading edge bar is lowered for the winter, make sure it is reset to the proper height in the spring to operate without damage.**
- 7. We recommend your system be maintained each spring: clean the guides, lube the system and clean the cover. See Owner's Manual for details.**

**Our service department is open year round for any questions you may have concerning your cover, or maintenance you may wish to have done.**

**Please call to schedule our crews to perform one of our  
Spring Special Maintenance Services!**
